João Pessoa, PB, Brazil | Remote

SUMMARY

Computer Science student at UFPB (Federal University of Paraíba) with hands-on experience building AI agents. At the Converge Challenge (an AI Agents hackathon at Porto Digital, Recife) I helped build OrçaAI, an agent that prices construction materials for architects. Seeking a remote internship in software development, data or AI to contribute to real-world projects.

PROJECTS

OrçaAI · AI agent for construction budgeting

Nov 2026

Converge Challenge, AI Agents hackathon · Porto Digital, Recife · orcaai-agent.vercel.app · GitHub

- Agent that takes an architect's bill of materials (CSV, Excel, PDF, IFC, SketchUp) and returns, within minutes, a price range per item with source stores, a purchase plan and a feasibility check against the client's budget.
- My back-end work: logistics module (nearest store branch via Serper Maps, route and travel time via OpenRouteService), feasibility and time/AI-cost savings calculations, and a public link to the agent's reasoning trace in Langfuse.
- Built the Next.js front end (landing page, multi-format upload, demo examples) and took over Vercel deployment when the original account hit its limit during the event.

Stack: Python, FastAPI, ReAct agent with tool calling, open-source LLMs (Kimi K2, GLM, Qwen), Tavily, Supabase, Langfuse, Next.js, TypeScript, Vercel

Matos · Rental Management System

2026

Web app in production for managing properties, leases and billing · contributor · GitHub

- Built the Expenses module end to end: data modeling and migration in Supabase (PostgreSQL), JavaScript UI and unit tests.
- Implemented payment method tracking with receipt attachments, also covered by tests.

Stack: JavaScript, HTML/CSS, Supabase (PostgreSQL), SQL, Vercel

SKILLS

Python | AI Agents (LLMs, tool calling) | FastAPI | Next.js / React | TypeScript | Supabase / PostgreSQL | C | Git / GitHub

EXPERIENCE

Mercado Casa Matos

2025 - 2026

Assistant

João Pessoa, PB

- Supported the modernization of business processes by implementing spreadsheets and systems that streamlined daily workflows

EDUCATION

Bachelor of Science in Computer Science Federal University of Paraíba (UFPB) — Aug 2026 - 2030 (expected)

João Pessoa, PB

In progress, 1st semester

ADDITIONAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C

Tools: Git, Vercel, Supabase, Claude Code, Spreadsheets

AI: ReAct agents, tool calling, observability (Langfuse)

Spoken Languages: Portuguese (native), English (intermediate, actively improving)
